K25

**BERNMAX OU**  
PRODUCTION OF SHELVING EQUIPMENT

Dismountable shelvings K25 are intended for equipping sales area of stores of any type: hypermarkets, DIY, Cash & Carry, supermarkets, discounters. Shelves show the principle of universality. Optional accessories are installed on the standard basic equipment. Variety of components and accessories comprises more than 1000 items.

Shelving height is determined by the upright height and can be equal to 4,5m. Standard equipment of a wall shelving: upright, base, base shelf with brackets, back panel. Shelves are arranged in a line of any length completed with an end section (upright with base).

Uprights and bases are the main load-bearing elements determining the overall load capacity of the whole shelving structure. Perforation pitch of the upright is 25 mm, height of the low base - 110 mm. Shelves are all-metal produced of coiled stock. Bars are welded to a shelf to reinforce the structure. Front profile acts both as a stiffener and a priceholder.

Back panels ensure rigidity and stability of the structure. Canopy with highlighting serves for efficient illumination of products on the shelves.

Shelves K25 are integrated with heavy-load shelves G50 that allows to provide areas for goods storing in shops.

# TECHNICAL DATA

**FINISHINGS**

Technology of shelving painting includes pretreatment of parts: degreasing and phosphating. As a result a phosphate film appears, that improves metal to polymers adhesion. Than by electrostatic method the parts are covered with epoxy polyether paint – self-extinguishing and inflammable material resistant to abrasion and mechanical effects, not containing any heavy metals.
